

bet 395

Like addictive drugs such as cocaine, heroin, nicotine and alcohol, gambling activates the brain's reward system, which is powered by dopamine. Dopamine is a neurotransmitter that helps regulate movement, emotion, cognition, motivation, and arousal. It is also involved in the brain's reward system, which is responsible for the pleasurable feelings associated with gambling.

Below are a few reasons why you may consider visiting a casino at times:

- It's a fun and exciting activity.
- You can win money.
- It's a social activity.
- It's a good way to relax and unwind.
